

Wrike Views

Wrike views panel can consist of views selected by the user or pre-defined by the administrator. Users can select from Wrike primary views or create and name a new custom view where they apply sorting, filters and settings. Custom views are saved and available to other space users.

Custom views allow you to create and save multiple views tailored to a specific objective or work view.

You can add views by clicking the **Plus** icon and selecting View. To hide the primary view or to delete the custom view click the arrow icon to the right of the designated view.

Whenever a project is created via duplication or from a blueprint, the view configuration will match the original.

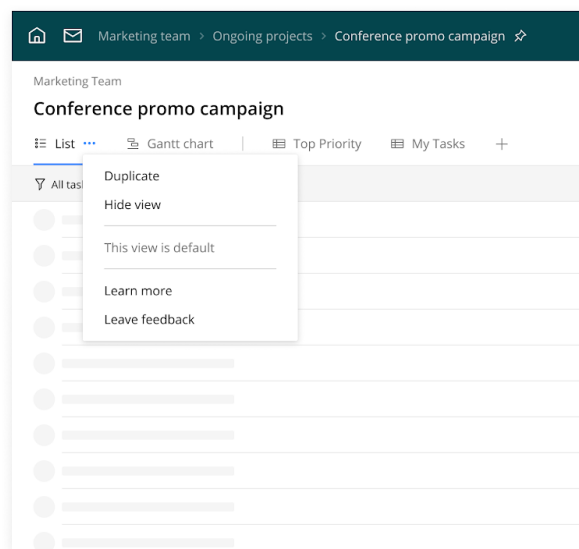

With **custom views** you can save view settings, such as filters and sorting, and share them with the team without duplicating effort.

In order to access the custom view settings, click the arrow icon to the right of the designated view. In the drop-down menu, the following actions are:

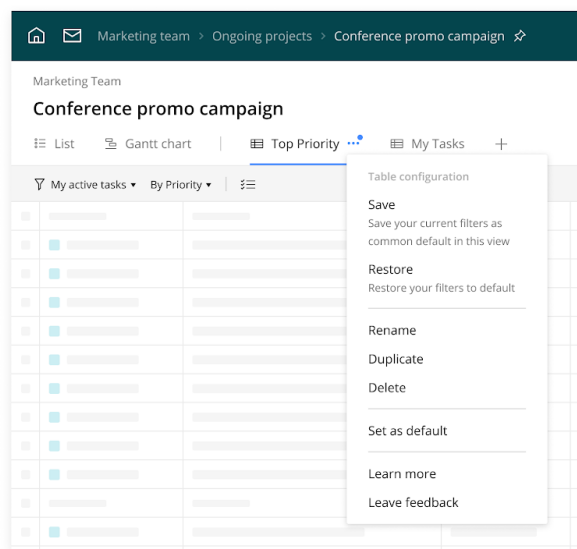

Custom views allow you to:

- **Save** filters for everyone on the team
- **Restore** filters to the default view
- **Rename** views that makes sense for you and the team
- **Set view as default** for projects and folders to make them available to team members when opening the project
- And **Duplicate** a custom view

Wrike Views

Custom view

Custom views are currently available for the List, Table, and Board view.

Who can customize the views

All admins and regular users can customize views. External users and collaborators cannot customize views. In enterprise accounts, the ability to customize views is controlled by Access Roles in Account Settings under 'Edit views'.
