

# Export Channel Missing Information

To help you prepare a product for posting on channels, you can export a file of required information that is missing from the product. You can then populate those values and import them into SellerCloud using a bulk update.

To export the missing information:

- 1 Select any number of products from the Manage Inventory page.
- 2 Click Action Menu > **Export Channel Missing Information**.
- 3 On the following page, select a channel.

- 4 Click **Continue** to generate the queued job. Click the link to monitor progress and access the output file.

If a selected item was previously ready for the channel, it will not be included in the output file. If all items selected are ready for the channel, no output file will be

produced.

- 5 Open the file and populate the missing information.
- 6 Save the file.

To import the missing information:

- 1 Open **Bulk Update Products** under the Inventory tab.
- 2 Select the file and the file type.
- 3 Click **Submit**.
