

Import Shadows

Check out this short tutorial on importing and removing shadow products in SellerCloud's **Delta** interface!

The instructions below are for SellerCloud's original interface.

You can easily bulk-import [Shadow Products \(https://help.sellercloud.com/article/UEE8qE0gJE-shadow-products-sku\)](https://help.sellercloud.com/article/UEE8qE0gJE-shadow-products-sku) using the **Import Product Shadows Template** file. (You can also use this template to *unshadow* products in bulk! Use the **Action** column described below.)

- 1 Go to Inventory > Manage Inventory > Import Product Info > **Import Product Shadows**.
- 2 Download the shadow template in the desired format (TAB Delimited, CSV, or Excel). [Open sample Excel template \(https://files.helpdocs.io/RFw6fNxIzH/articles/7AFrjUyb3q/1546011781120/import-product-shadows-template.xls\)](https://files.helpdocs.io/RFw6fNxIzH/articles/7AFrjUyb3q/1546011781120/import-product-shadows-template.xls).

- 3 Paste the product information into the file columns as follows:
 - Parent SKU - Enter the main SKU of the product.

- Shadow SKU - Enter the alternate SKU (e.g., for another ASIN, or for a product from another company). Existing Product IDs in your catalog entered under this column will be linked to parents as shadow. Product IDs that do not exist in your catalog will be created and link to the defined parent as a shadow.
- Company ID (optional) - Enter the company the shadow is associated with. You do not need to select the company associated with the shadow from the Company dropdown.
- Fulfilled By (optional) - Enter either Amazon or Merchant
- Action (optional) - To bulk-unshadow products, enter this exact text for every product to unshadow: `_REMOVE_SHADOW_`
This action will unlink a shadow sku from a shadow parent.

	A	B	C	D	E
1	ParentSKU	ShadowSKU	CompanyID	FulfilledBy	Action
2					<code>_REMOVE_SHADOW_</code>
3					
4					
5					
6					
7					
8					

- 4 Save your populated file > Choose File > **Import Shadows**.
