Product Condition / Item Condition

A product condition is the category name of a product that includes conditions specific to Amazon, eBay, Buy.com, Newegg, Sears, and Reverb. For example, a condition "New" can include a Buy.com condition - "Brand New." See the images below as reference.

To configure product conditions:

1. Select **Enable product condition display** in the Client Settings.

2. Navigate to Settings > **Product Conditions**.

3. Click **Add Product Condition**.

4. Enter the **Condition Name** and map the marketplace product conditions. You can also add a **Condition Note**.

5   Under the Client Setting **Enable product condition display** that you enabled above is a drop-down to choose a **Default Condition**. If a product has a different condition than that default condition, you can choose the appropriate condition on the product's home page.

- To bulk update, use the column header **ProductConditionInHouse.** You can bulk-update with the Condition Name or Condition ID.
- In the Advanced Search tab on the Manage Inventory page, you can filter search results by condition.
