Understanding Blueprint Migrate Licensing for Blue Prism
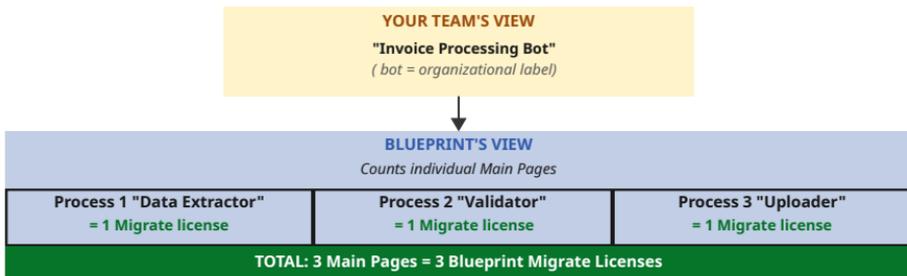

1 Blue Prism Process = 1 Main Page = 1 Blueprint Migrate License

Consumes a License ✓	Does NOT consume a License ✗
• **Blue Prism Processes** — each contains exactly 1 Main page • Main Pages cannot be renamed or removed	• **Blue Prism Objects** — Objects do not contain Main Pages • Additional Pages within a Process (only the Main Page counts)

## Common Misconception: "Bots" vs. Processes

Many organizations group multiple Blue Prism Processes and Objects together under a single name and refer to this grouping as a "bot", "automation", or even a "process". This is a common and reasonable way to describe the business function that these artifacts perform together.

YOUR TEAM'S VIEW

"Invoice Processing Bot"
(bot = organizational label)

↓

BLUEPRINT'S VIEW
Counts individual Main Pages

Process 1 "Data Extractor"	Process 2 "Validator"	Process 3 "Uploader"
= 1 Migrate license	**= 1 Migrate license**	**= 1 Migrate license**

TOTAL: 3 Main Pages = 3 Blueprint Migrate Licenses

Key Point: *"Bot" is not a Blue Prism platform concept* — it's an organizational label. Blueprint Migrate licenses are formulaic and determined simply by number of Main Pages

Example: Counting Licenses

Consider a grouping called **"Global Transformation."** Your team may refer to this as one bot, but it is composed of 9 Blue Prism Processes:

Because each of the 9 Processes contains exactly 1 Main Page, this grouping consumes **9 Blueprint Migrate licenses** — regardless of whether the team refers to it as one bot.

If this grouping also includes Blue Prism Objects, those Objects do ***not*** consume any additional licenses

Quick Reference

Blue Prism Artifact	Has Main Page	License Consumed?
Blu Prism Process	Yes (exactly 1)	Yes - 1 license
Object	No	No
Additional Pages (within a Blue Prism Process or Object)	No (only Main page)	No
"Bot" or "Automation" grouping (N Processes)	Yes (1 per Main page)	Yes - 1 license per Main Page
