

B2Router Integration

Exchange invoices and business documents with your trading partners through B2Router, run by HubBroker.

**Inbound and outbound
flows**

Validated on every file

**Monitored alongside
Peppol**

Agenda

Why HubBroker

Four reasons to route through us

01

How it works

Adaptors, flows and directions

02

Inbound and outbound

Both directions, step by step

03

One transaction view

B2Brouter next to Peppol

04

Capabilities

Features, documents and data flows

05

Scope and licensing

Requirements and how we quote

06

Why HubBroker for B2BRouter

2. Reach more trading partners

B2BRouter routes documents over Peppol and other public and private e-invoicing networks.

4. Monitored alongside Peppol

B2BRouter transactions appear on the same transactions page you use for Peppol.

1. One partner for every flow

HubBroker runs your B2BRouter connection, so both directions use one integration platform.

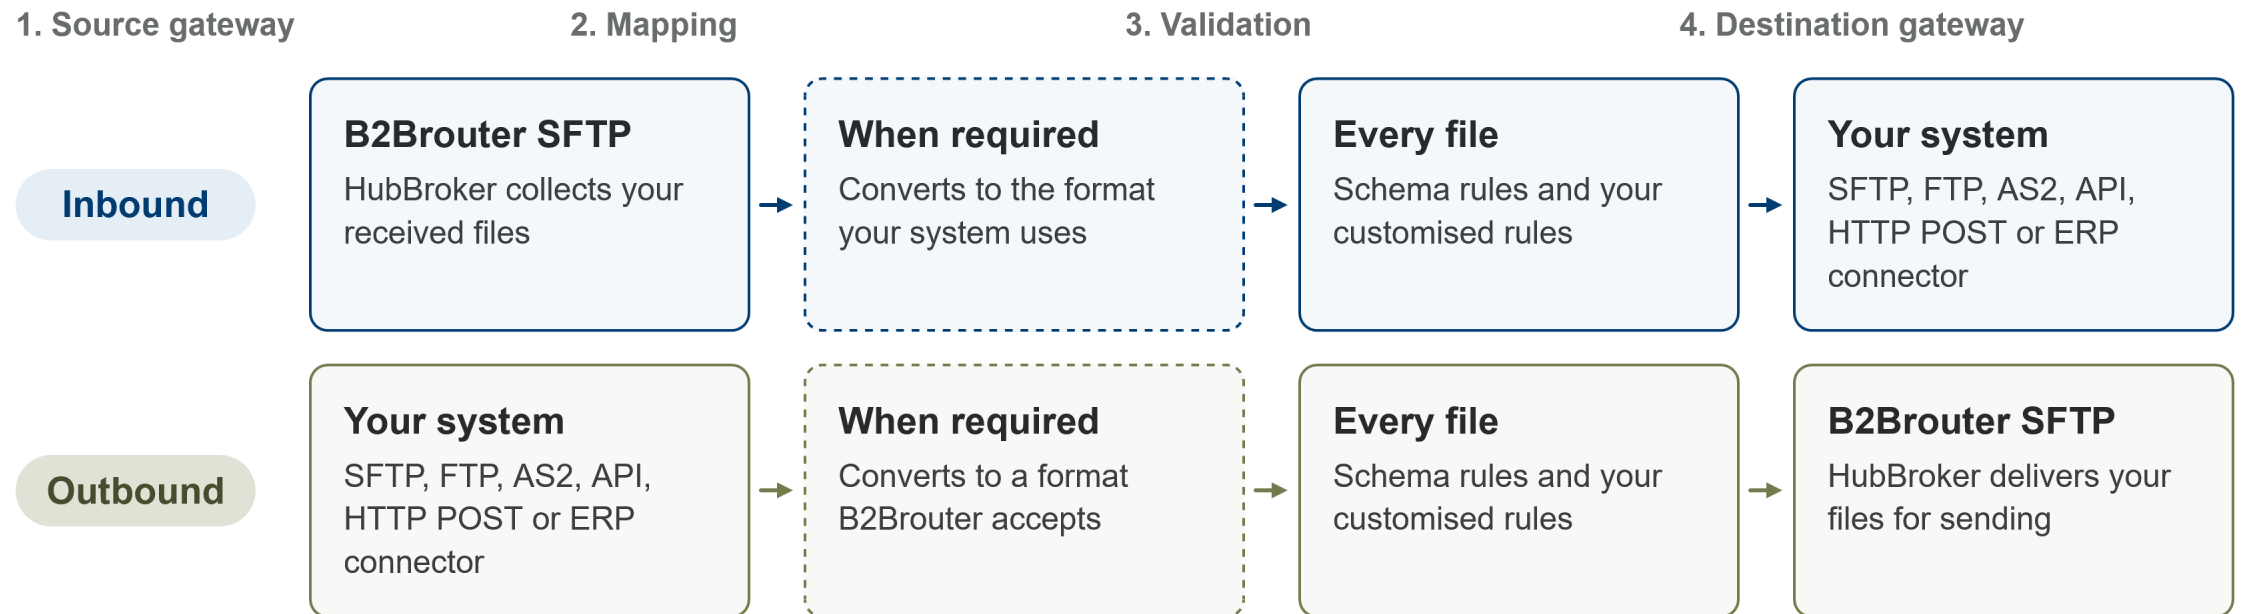

3. Validated before delivery

Every file is checked against schema rules and your customised rules before it moves on.

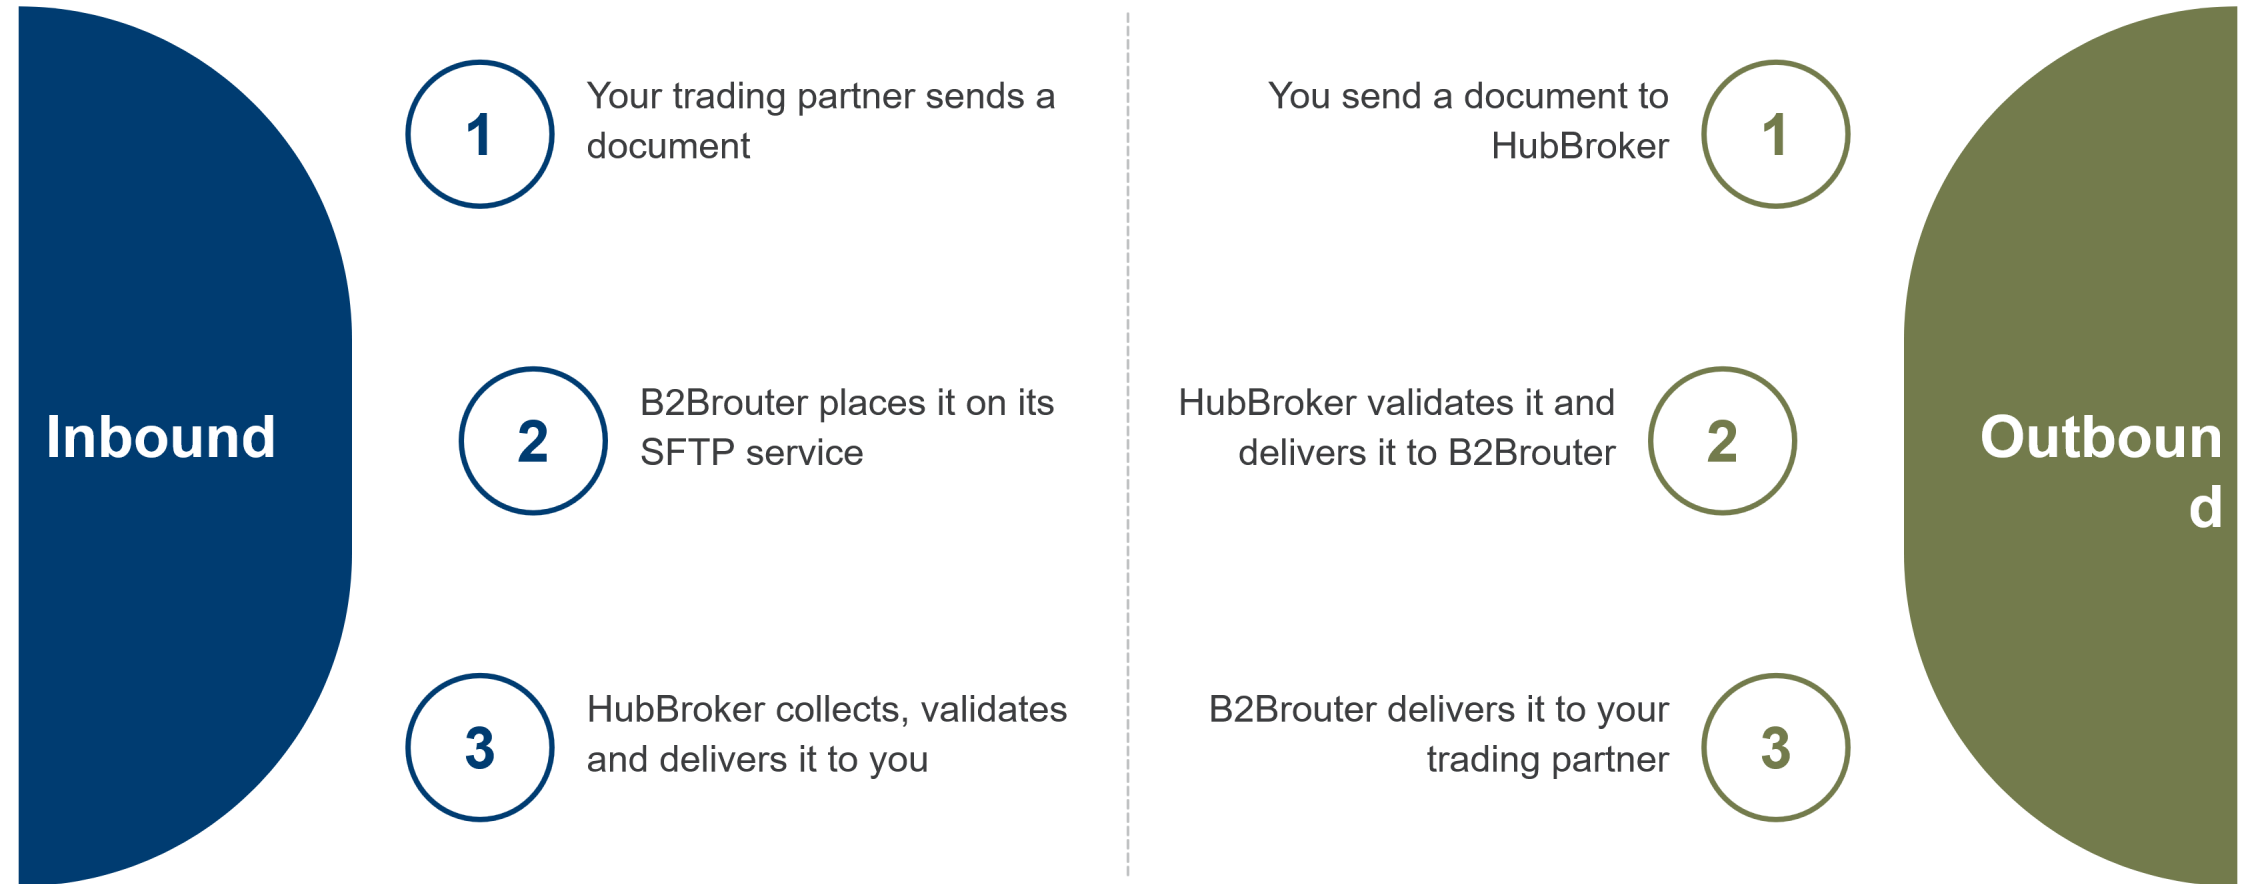

What is a HubBroker adaptor?

An adaptor joins one source gateway to one destination gateway. Mapping is added only when a format change is needed.

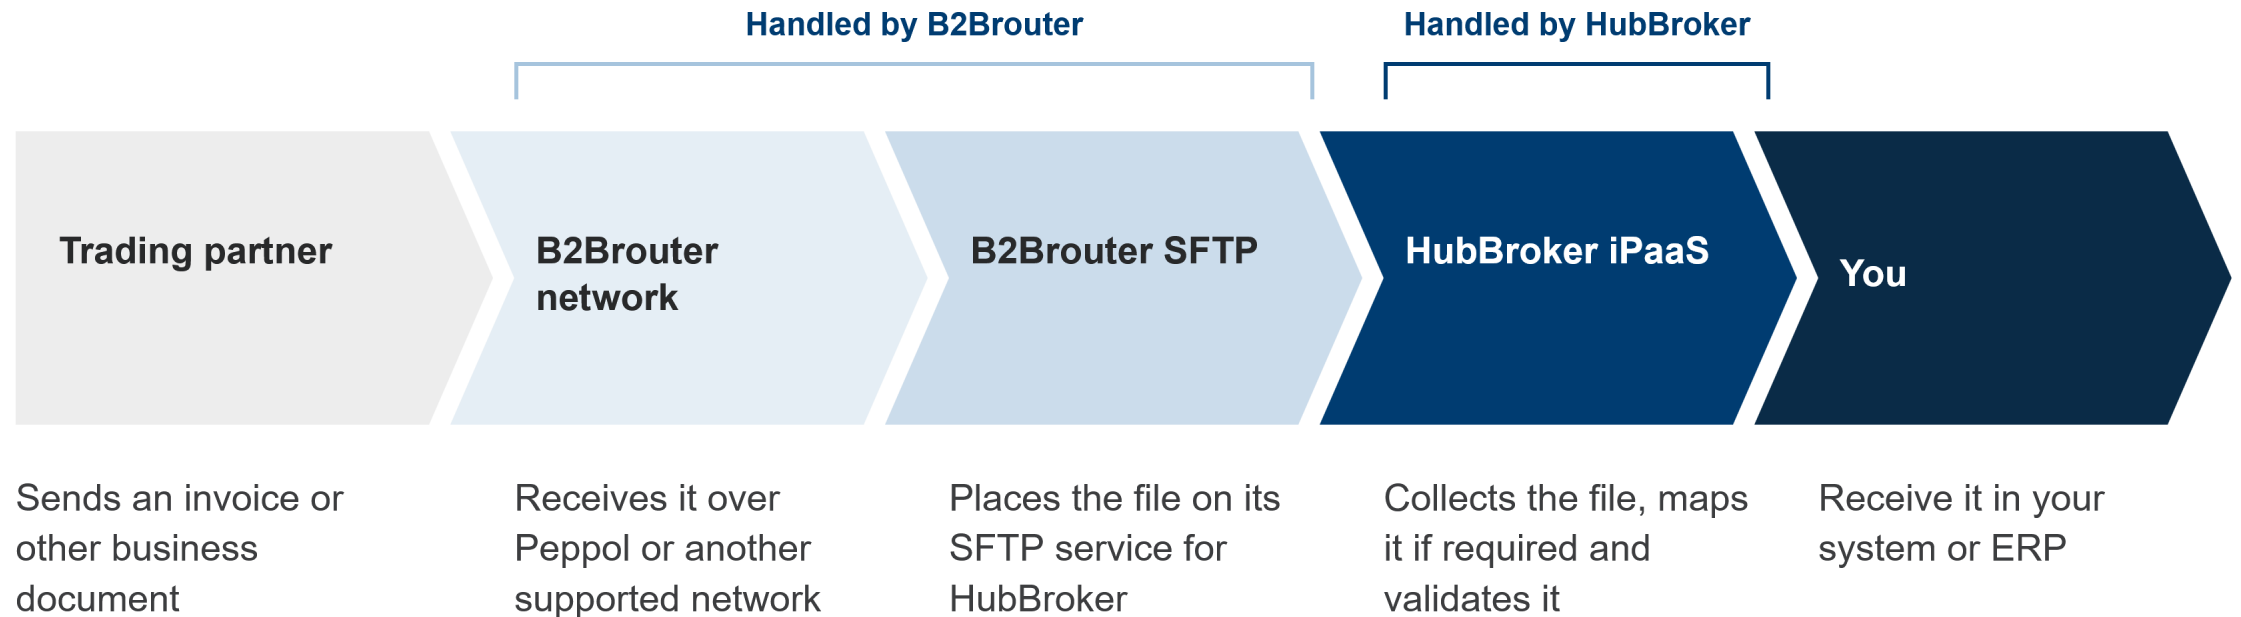

Direction is shown from your point of view. Inbound: from B2Brouter to you. Outbound: from you to B2Brouter. A dashed box is optional.

Two directions, one platform

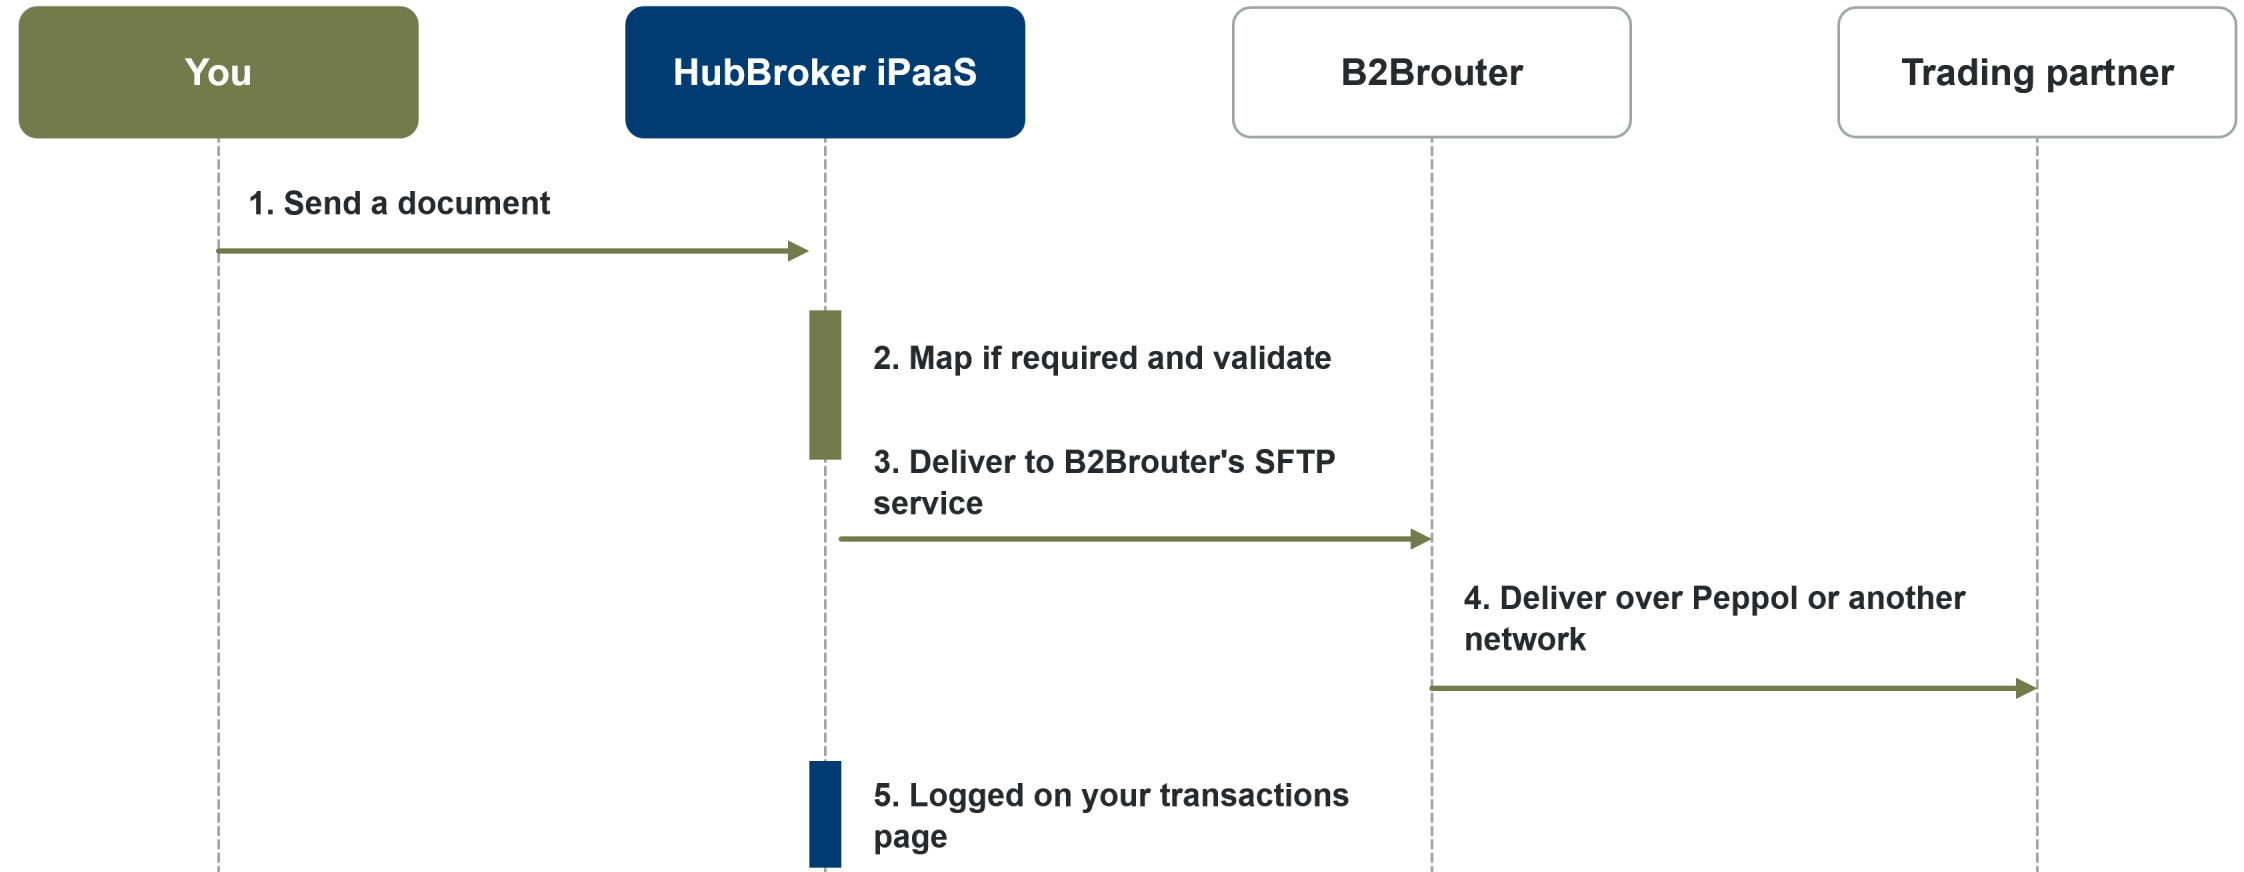

Inbound: from your trading partners to you

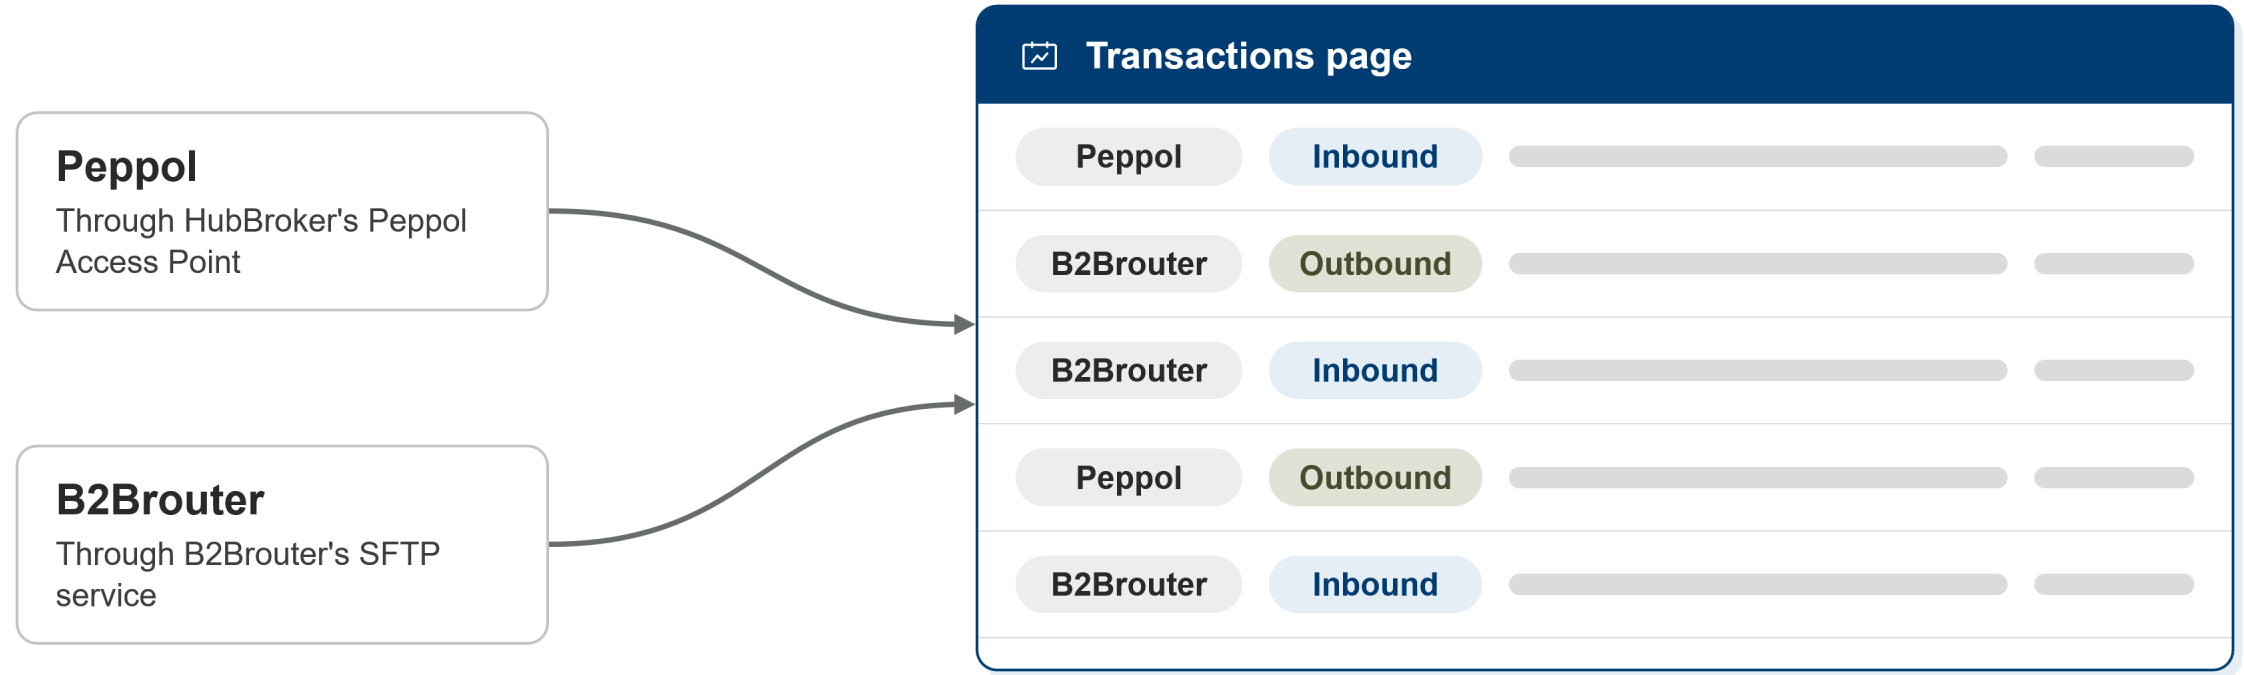

Direction is shown from your point of view. HubBroker collects files from B2Brouter's SFTP service on a schedule [TO CONFIRM: interval].

Outbound: from you to your trading partners

One view for every transaction

B2Router transactions appear on the same transactions page you use for Peppol in HubBroker iPaaS.

Illustration, not a product screenshot.

Capabilities

Inbound delivery

- Collects files from B2Brouter's SFTP service
- Delivers them to your system or ERP

Outbound delivery

- Receives documents from your system
- Delivers them to B2Brouter's SFTP service

Mapping when required

- Converts formats only when needed
- Customised mapping and transformation

Validation

- Schema rules on every file
- Your customised rules when applied

Monitoring

- Same transactions page as Peppol
- E-mail notifications per adaptor settings, including failed files

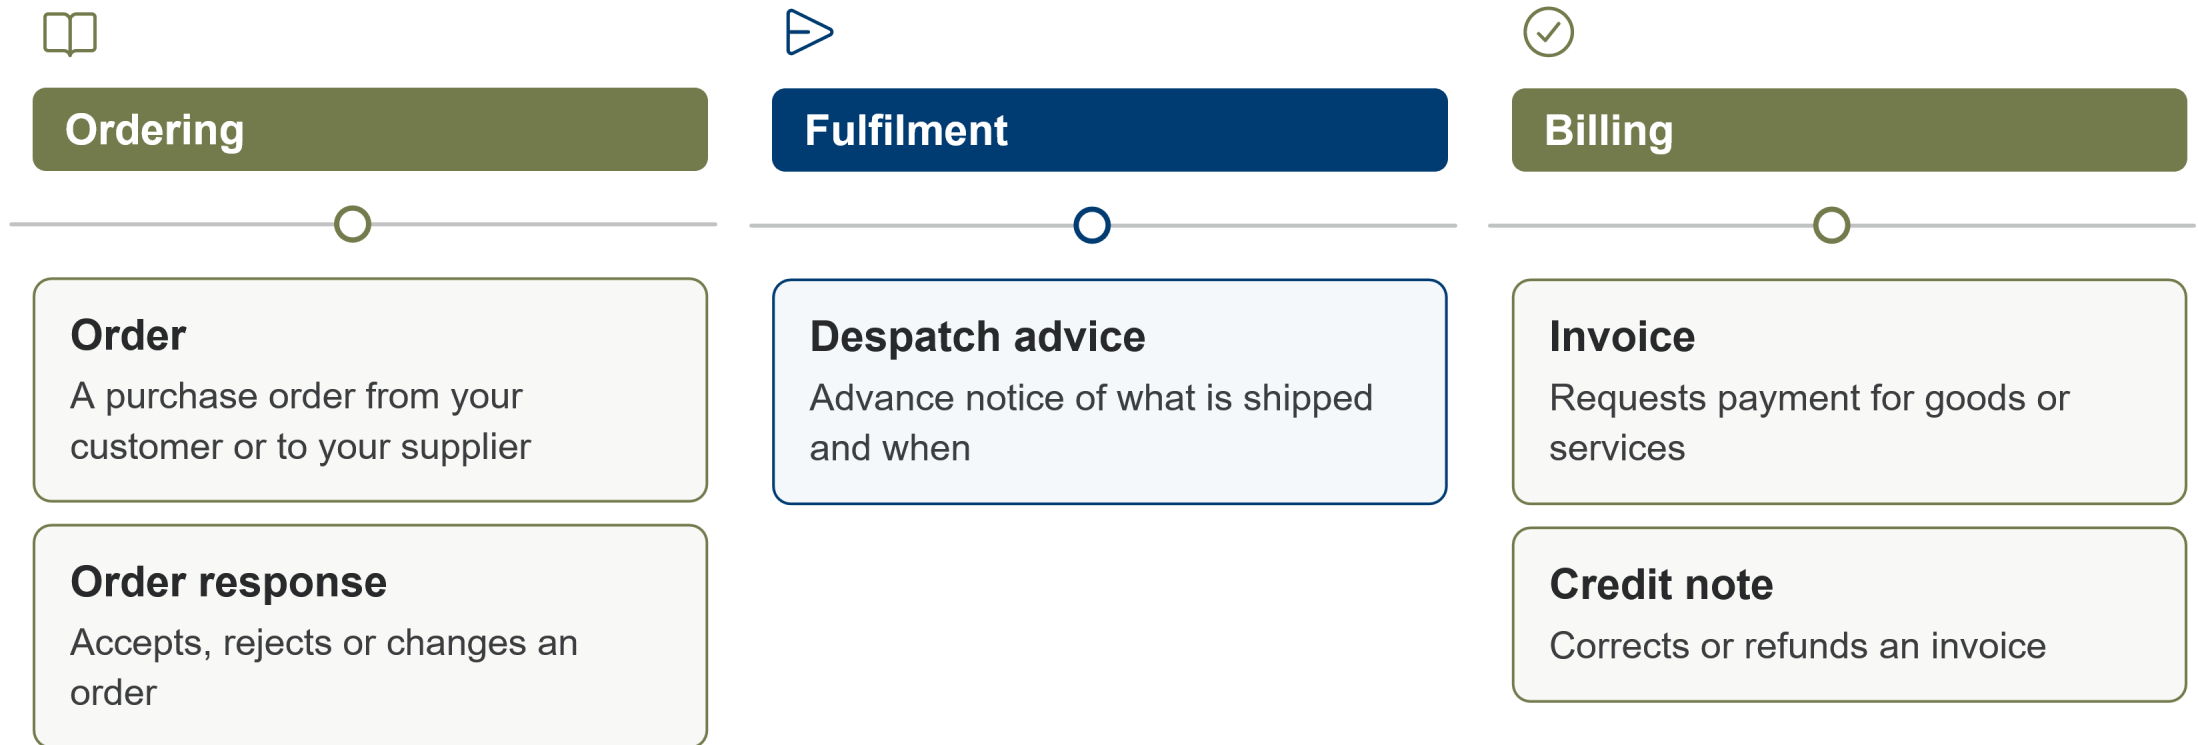

Your choice of gateway

- SFTP, FTP, AS2, API or HTTP POST
- ERP connector for supported ERPs

Documents you can exchange

HubBroker exchanges these documents through B2Brouter, in the order of the purchase cycle.

Need another document type? Contact us at hubbroker.com.

Data flows at a glance

What moves	From	To	Direction	Adaptor
Business documents from your trading partners	B2Brouter SFTP service	Your system or ERP	Inbound	Inbound adaptor
Business documents to your trading partners	Your system or ERP	B2Brouter SFTP service	Outbound	Outbound adaptor

Documents: orders, order responses, despatch advice, invoices and credit notes. Direction is shown from your point of view.

How every flow runs

Connect the way you work

Exchange files with HubBroker over secure SFTP connections

SFTP

API

Send and receive documents through the HubBroker API

Exchange files with HubBroker over FTP

FTP

POST

Push documents to HubBroker, or receive them, by HTTP POST

Exchange documents with HubBroker over AS2

AS2

ERP

Import and export directly with supported ERPs. Other ERPs on request.

Every gateway can both receive and send documents.

Scope and requirements

What HubBroker provides

- Registration of your company on B2Brouter through HubBroker's account
- Connection to B2Brouter's SFTP service in both directions
- Inbound and outbound adaptors, with mapping when required
- Validation of every file against schema and customised rules
- Monitoring on the transactions page, with e-mail notifications based on your adaptor settings
- Setup and support as agreed in your proposal

What you need

- No B2Brouter account of your own: HubBroker registers you
- Trading partners reachable through B2Brouter
- A gateway or supported ERP to exchange files with HubBroker
- A HubBroker iPaaS subscription

Licensing and support

Subscription

Based on your transaction volume and number of trading partners

01

Implementation

Quoted in a scoped commercial proposal after a scoping call

02

Ongoing support and maintenance

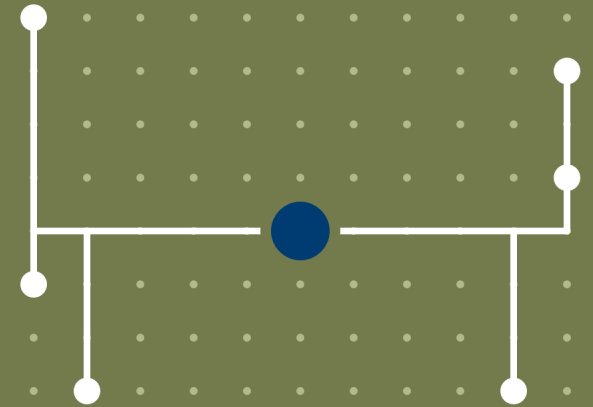

Quoted in the same proposal, prepared by our commercial team

03
