# Camera Module Kit for Kiosk Laser Machine User Manual

# Unbox

Camera Module

(2) Kraft Paper

USB-Type A Cable

Focus Card

User Manual

# Step 1: Installation

 Place the machine upside down and manually move the laser module to the upper right position.

Tip: During installation, please be sure to turn off the power of the machine first and seal the laser air nozzle with an opaque sticker.

Move the laser module to the upper right position

2. Install the camera module into the top cover buckle.

- Plug the cable terminal into the corresponding connector, as shown.
- 4. Push the camera cable through the cable clamp opening and hang it inside.

Opening Direction of the Cable Clamp

Congratulations! You have completed the camera installation steps; follow us into calibrating the camera lens.

# Step 2: Camera Focus and Adjustment

What you need in this step:

- The Kiosk
- The computer already has Lightburn installed.
- USB-Type A Cable
- Focus Card

## PART 1: Preparatory Work

- 1. Please open the Lightburn software and select the kiosk model for calibration.
- 2. Connect the kiosk to your computer with the USB-Type A cable.
- 3. Click the "window" on the bar and select "camera control".
- Move the laser head module to the upper left corner for subsequent operation easily.

05

5. Press the power button to turn off the machine.

### PART 2: Calibrate Camera Lens

 Click "camera control" in the control bar, and select the camera name as "USB Camera".

06

2. Right-click and select "Calibrate Camera Lens".

- After entering the "Lens Calibrate Wizard" interface, select "USB Camera".
- 4. Select "standard Lens" and click "Next".

- Place the focus card according to the guidelines and turn off "Honeycomb check enabled".
- 6. Click "Capture" to get the value. The focus card can be properly raised with a wooden block, to prevent the black circle from being unreadable due to exposure. Then click "Next".

 After completing the above operations, click "Finish" to complete the Calibrate Camera Lens.

## PART 3: Calibrate Camera Alignment

What you need in this step:

- Kraft Paper
- 1. Press the power button to turn on the machine.
- 2. Place the Kraft paper and focus.
- 3. Right-click and select "Calibrate Camera Alignment".
- 4. Click "Camera is over the work area" icon.

![](_page_11_Picture_0.jpeg)

Select "USB Camera", wait for the image to be acquired, then click "Next".

![](_page_11_Picture_2.jpeg)

 Enter the required parameters. The following templates are suitable for 10W laser modules: "Fill Speed" enter 6000; "Line Speed" enter 3000; "Fill Power" enter 100; "Line Power" enter 60; "Scale" enter 48.

#### For the 5W laser module, modify "Fill Speed" to 4000.

#### For the 2.5W laser module, modify "Fill Speed" to 2000.

- Click the "Frame", make sure running area is not outside the Kraft paper.
- Click "Start" and wait a few moments for the engraving. Then click "Next".

## PART 4: Verify the Focusing Effect

What you need in this step:

- Kraft Paper
- 1. Place the Kraft paper and focus.
- 2. Using the square tool, draw 10 square shapes, with length in increments of 10, 20,30 to 100.

### You can use "Align both vertical and horizontal centers" and "Move to Page Center" in the toolbar to adjust the graphic arrangement.

3. For the 10W laser module, adjust speed to 2000 mm/min, power 40%.

For the 5W laser module, adjust speed to 2000 mm/min, power 60%.

For the 2.5W laser module, adjust speed to 2000 mm/min, power 100%.

- 4. Click "Update Overlay" to importing images.
- Confirm the camera mesh overlaps with the engraving mesh. If not, you need to adjust Width, Height, X Shift, Y Shift to keep them overlapping.

After the complete adjustment, please take a screenshot of the parameter picture and save it on your computer with the file, so that it can be directly imported next time if there is any deviation.
