

# Cyber Security Training

At Boxphish, we are passionate about providing our users with the skills needed to identify and avoid cyber-attacks, reducing risk and protecting both the individual and the organisation.

## Our Mission

We use interactive training courses and real-world phishing simulations to educate and protect our users.

Automated learning journeys are delivered on a monthly basis to train our users in cyber safety, helping them learn how to reduce human error and become the first line of defence against cybercrime.

## How We Help

**95%** of cyber attacks now involve some degree of human error

- Our training focuses on the human element, with our reporting designed to identify the most at risk area of your organisation, allowing us to tailor our courses to you, tackling the problem at its source.

**86%** of organisations don't currently invest in cyber security

- This is leaving millions of individuals vulnerable to cyber attacks, and millions of pounds of revenue at risk. Cyber training is a simple solution to help generate the highest ROI for your security budget & protect your team.

**70%** of cyber attacks are delivered via phishing emails

- We use phishing simulations based on real-world emails from supposedly reputable sources and highlight key errors to watch out for, to protect your users both at home and at work.

## Trusted By Thousands
