

# Helping organisations mitigate the risk of **cyber attack**

Elevate awareness, positively influence security behaviours, and transform your cyber culture with the security awareness training platform made for busy IT teams.

## Product **overview**

### **Phishing simulations**

Test your organisations susceptibility to attack and raise internal awareness on the latest threats.

### **Training content**

Educate employees on best-practice cyber security advice with short video-based training content, gamification and quizzes.

### **Reporting suite**

Pinpoint vulnerabilities, track training course completion rates, and monitor your improving cyber awareness culture.

### **Policy management**

Maintain version control, increase policy engagement and evidence employee acceptance of key policies.

## Product & service stand-outs

### Educating on the latest threats

Through working closely with a leading email security partner who secure over two million endpoints globally, we gain real-time insight into phishing trends. This enables us to keep our library up to date and educating end users on the latest and most relevant threats.

### Custom-made content

Completely customise video-based training content. Choose from animation or live-action style, and include terminology, languages or policies unique to your organisation. Boxphish will work with you to create content that perfectly suits your training requirements.

### Built with automation in mind

The platform's low-touch nature means you can set and forget; focusing on the day job. You'll have complete confidence that your employees are getting the training they need to protect themselves, and your organisation, without reliance or strain on internal resources.

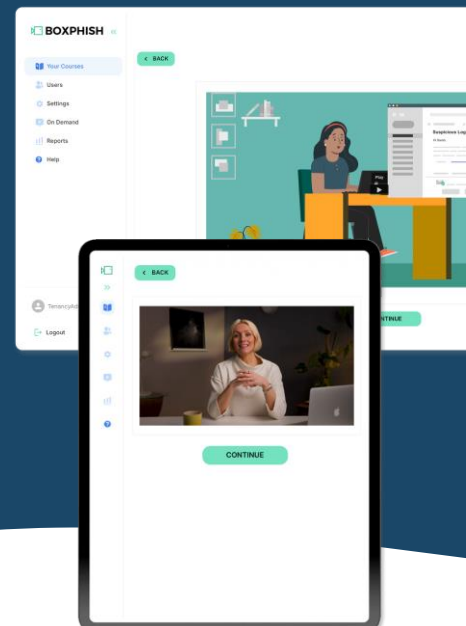

### Ease of use

Everything is accessed from a single platform that has been designed with simplicity in mind. Deployment and management is quick and scalable. The end user experience is equally as simple. Users can access via SSO and complete courses, any time, on any device.

### Support & service

With Boxphish, you don't just get a quality product, you also benefit from an industry leading service. So, unlike alternative cyber-SAT platforms, when you choose our product, you also get our partnership. Our team will not only assist you with set-up and deployment, but day-to-day support queries and on-going success management.

## Don't just take our word for it

"Boxphish has very quickly had a brilliant impact on the security culture at the council: the content of the educational modules and simulations are well thought out, accessible and engaging across the whole workforce, meaning they can be used very effectively right out of the box. Implementing, running and maintaining the system requires very little administration – a huge advantage for small teams with limited resources."

### Principle Information Security Officer North Lincolnshire Council

Boxphish is a leading low-touch cyber security awareness training platform that arms organisations—and their people—with the tools and knowledge needed to reduce the risk of cyber attack. This is achieved by combining real-world phishing simulations, quality training content and actionable analytics into a single, easy to manage, platform.

Deployment is quick and scalable, from one organisation with 50 employees through to global enterprises with tens of thousands.

The platform is proven to boost organisation-wide cyber awareness, positively influence security behaviour and reduce overall human risk.

Since 2018, we've been helping organisations including Macmillan, Police Scotland, Cambridge University and North Yorkshire County Council strengthen their cyber defences. Along the way, we have set the standard for what a people-first approach to cyber-SAT looks like, and how to measure it.
