

Identity theft

Identity theft often begins with a phishing message, leading you to a fraudulent website where your data is stolen. In these cases, ask yourself if it could be a SCAM:

- **SENDER** Who is the message coming from? Are you sure it's really them?
- **CONTENTS** Is it asking for details you wouldn't normally share? Anything suspicious?
- **ADDRESS** Is the address correct for your organisation? Are there any spelling mistakes?
- **MISTRUST** Is there anything about the email that rings alarm bells? Are you sure you can trust it?

Best practices:

Ensure your devices & cards are protected

Always be cautious

Use strong & unique passwords
