

Safe homeworking

To ensure you are maintaining security when working from home, follow our highlighted best practices:

- Have your devices authorised by your IT department – this should ensure anti-virus software is properly installed, and you have a secure VPN in place
- Avoid sharing devices with other individuals in your home – to limit the risk of human error
- Stay on top of your software updates – un-patched vulnerabilities could lead to unauthorised criminal access and contamination or theft of cloud hosted data
- Maintain a connection with your IT team – necessary in case you need to raise any security questions or concerns
