

Remote and workplace security

Maintaining secure workspaces - whether in office, at home, or on the go - is essential for protecting organisational assets, data, and reputation in today's digital world.

Security isn't about being paranoid - it's about being street-smart in an evolving digital age. As workplaces move to hybrid models, security practices must adapt accordingly. Everyone shares responsibility for creating safer collaborative spaces regardless of work location.

Five key things to take away:

Office security

Stay alert despite existing security measures

Clear desk policy

Maintain tidy work environment and don't leave confidential files visible

Home working security

Designate a specific work area and keep prying eyes from confidential information

Working on-the-go security

Don't connect to open, unsecured networks and always lock screen when stepping away (even at home)

Report issues immediately

Quick reporting is essential for minimising damage, whether breach occurs at home, on-the-go, or in office
